

# How does peer review work

## at Open Research Europe?

Get to grips with our open, post-publication peer review model, so your research can move through this process quickly and easily.

Look out for the **steps in blue** as these are points in the process where you need to take action!

Suggest five potential reviewers for your article

Our **Editorial team** check your suggested reviewers meet our criteria

**Five reviewers are approved**

Your article is published!

Our **Editorial team** invite your suggested reviewers to review your article

**The reviewer accepts the invitation**

A deadline for the report is agreed

The peer review report is submitted to the **Editorial team**

Our **Editorial team** check the report, including ensuring it meets our Code of Conduct

The report is published **openly alongside your article**, along with the reviewer's name and affiliation; your article title is updated to show its new peer review status

Your article 'passes peer review' when it reaches **two Approved**, or one **Approved and two Approved with reservations**

(These must be from separate, independent peer review reports)

**Passed peer review!**

Your article is indexed in PubMed, Scopus, and more (along with its associated reviews)

**Reviewers not approved**

One or more of your five potential reviewers don't meet our criteria

Our Editorial team check your suggested reviewers meet our criteria

You suggest more reviewers for your article

**Reviewer declines the invitation**

Our Editorial team request more suggestions from you

The same experts who reviewed the previous version are invited to review the changes you have made

Your revised article is published on **Open Research Europe**

**Not passed peer review?**

Revise your article and resubmit as a new version
